Constraints. The first line tells you how many players there are in this tournament. Each line in the output represents a round in the tournament and we want to see every round and the move that the player used for that round. Assume that there are enough players to make an even tournament like below.

~~Art of Problem Solving~~

Finding the optimal cost of doing so is the actual problem we are solving here. I'm doing that later using the min cost matching, others are doing it using the mincost maxflow. In the part of my solution you are quoting I'm just computing the cost of one special case: the one where each party is served by a different team.
