Chapter 27 Female Reproductive System

Unlike its male counterpart, the female reproductive system is located primarily inside the pelvic cavity. Recall that the ovaries are the female gonads. The gamete they produce is called an oocyte. We'll discuss the production of oocytes in detail shortly. First, let's look at some of the structures of the female reproductive system.

Biology 108 - A&P - Chapter 27 - female reproductive system

Unique for its role in human reproduction, a gamete is a specialized sex cell carrying 23 chromosomes—one half the number in body cells. At fertilization, the chromosomes in one male gamete, called a sperm (or spermatozoon), combine with the chromosomes in one female gamete, called an oocyte. The function of the male reproductive system is to produce sperm and transfer them to the female ...

27.1 Anatomy and Physiology of the Male Reproductive ...

In this chapter, you will explore the male and female reproductive systems, whose healthy functioning can culminate in the powerful sound of a newborn's first cry. Previous: 26.5 Disorders of Acid-Base Balance

Introduction - Anatomy and Physiology

An overview of the reproductive system for both sexes: The sex cells of the body are called gametes (sperm and egg). A fertilized egg is called a zygote. The primary sex organs are those which produce gametes; so testes in men and ovaries in females.
