Africa has experienced dozens of conflicts over a variety of issues during the past two decades. Responding to these conflicts requires concerted action to manage the crises – the violence, the political discord, and the humanitarian consequences of prolonged fighting. It is also necessary to address the long-term social and economic impacts of conflict, to rebuild communities, societies and states that have been torn apart. To accomplish this requires the involvement of institutions and groups rarely considered in formal official African conflict management activities: schools, universities, religious institutions, media, commercial enterprises, legal institutions, civil society groups, youth, women and migrants. These groups and organizations have an important role to play in building a sense of identity, fairness, shared norms and cohesion between state and society – all critical components of the fabric of peace and security in Africa. This volume brings together leading experts from Africa, Europe and North America to examine these critical social institutions and groups, and consider how they can either improve or impede peaceful conflict resolution. The overarching questions that are explored by the authors are: What constitutes social cohesion and resilience in the face of conflict? What are the threats to cohesion and resilience? And how can the positive elements be fostered and by whom? The second of two volumes on African conflict management capacity by the editors, The Fabric of Peace in Africa: Looking beyond the State opens new doors of understanding for students, scholars and practitioners focused on strengthening peace in Africa; the first volume, Minding the Gap: African Conflict Management in a Time of change, focused on the role of mediation and peacekeeping in managing violence and political crises.

Evidence continues to accumulate indicating that tax havens (as they are familiarly called) account for a staggering multi-trillion-dollar loss of tax revenues worldwide. Yet, as this crucially important book shows, such offshore financial centres (OFCs) represent merely the ' low-hanging fruit ' of a massive malaise reaching into every corner of today ' s global financial services landscape with the so-called New York-London axis at its root. In a biting critique and analysis of the tax and regulatory environments from which OFCs operate, the author demonstrates that OFC-like features exist in almost every jurisdiction as a virtually inevitable outcome of the transformation of economies worldwide over the past three decades, as nations and economic blocs compete for foreign investments, and as nations seek expansion of markets to accelerate growth. Covered aspects of this phenomenon include the following: the financialization process in global transactions; erosion of credibility in political establishments with regard to their ability to govern from the centre; ultralight regulatory enclaves found in parts of developed countries; public pressure demanding enhanced international cooperation and global tax reforms, now increasingly led by the US Biden administration, and increasingly likely to reach consensus among G7 economies; and momentum generated for reform of financial reporting systems by the leaked Panama and Paradise Papers, as well as the gathering impact of the COVID-19 pandemic that led to growing government involvements in national and regional economies to protect the health and economic welfares of their respective populations. With its insights into why OFCs persist despite tightening of the rules regarding tax and financial transparency, and its insistence that the blameworthiness of large-scale tax avoidance should be assessed as a global tax problem requiring coordinated and collaborative response from both developing and advanced economies, this book takes a giant step towards genuine international tax reform. It will prove of enormous value to financial institutions, multinational corporations, tax experts, and lawmakers seeking to mend a world increasingly troubled by illicit financial flows, and problems posed by large individual and corporate tax escape artists. Disputes in the energy and natural resources sector are at the heart of international arbitration. With more arbitrations arising in the international energy sector than in any other sector, it is not surprising that the highest valued awards in the history of arbitration come from energy-related arbitrations. Energy disputes often involve complex and controversial issues relating to security, sovereignty, and public welfare. International Arbitration in the Energy Sector puts international energy disputes into a global context, providing broad coverage of different forms and systems of dispute resolution across both renewable and non-renewable sectors. With contributions from leading practitioners, arbitrators, academics, and industry experts from across the globe, the eighteen chapters in the book enable readers to compare the approaches to, and learnings from, energy arbitrations across various legal systems and geographic regions. After outlining the international energy arbitration legal framework, the text delves into a detailed analysis of the problems which regularly arise in practice. These include, among other things, commercial disputes in Part I (e.g. over the upstream oil sector and long-term gas supply contracts), investor-state disputes in Part II (e.g. under the Energy Charter Treaty), and public international law disputes in Part III (e.g. concerning international boundaries and the distribution of natural resources). Alongside recent developments in the international energy sector, attention is given to climate and sustainable development disputes, which raise important questions about enforcing sustainability objectives on individuals, corporations, and states. Backed by analyses of arbitral awards, national court and international tribunal decisions, treaties, and other international legal instruments, as well as current events and news in the energy industry, this text offers a unique contribution to international energy literature and provides insightful commentary on the prevalent issues in the field. It is essential reading for any practitioner or researcher in the energy and natural resources sector.

This book analyses the challenges of secrecy in security research, and develops a set of methods to navigate, encircle and work with secrecy. How can researchers navigate secrecy in their fieldwork, when they encounter confidential material, closed-off quarters or bureaucratic rebuffs? This is a particular challenge for researchers in the security field, which is by nature secretive and difficult to access. This book creatively assesses and analyses the ways in which secretaries operate in security research. The collection sets out new understandings of secrecy, and shows how secrecy itself can be made productive to research analysis. It offers students, PhD researchers and senior scholars a rich toolkit of methods and best-practice examples for ethically appropriate ways of navigating secrecy. It pays attention to the balance between confidentiality, and academic freedom and integrity. The chapters draw on the rich qualitative fieldwork experiences of the contributors, who did research at a diversity of sites: for example at a former atomic weapons research facility, inside deportation units, in conflict zones, in everyday security landscapes, in virtual spaces and at borders, bureaucracies and banks. The book will be of interest to students of research methods, critical security studies and International Relations in general. From the author of the New York Times bestseller Prisoners of Geography, the highly anticipated follow-up that uses ten maps of crucial regions around the globe to explain the geopolitical strategies of today ' s world powers and what it means for our future. Tim Marshall ' s global bestseller Prisoners of Geography offered us a " fresh way of looking at maps " (The New York Times Book Review), showing how every nation ' s choices are limited by mountains, rivers, seas and concrete. Since then, the geography hasn ' t changed, but the world has. Now, in this revelatory new book, Marshall takes us into ten regions that are set to shape global politics and power. Find out why the Earth ' s atmosphere is the world ' s next battleground; why the fight for the Pacific is just beginning; and why Europe ' s next refugee crisis is closer than we think. In ten chapters covering Australia, The Sahel, Greece, Turkey, the UK, Iran, Ethiopia, Saudi Arabia, Spain and Space, Marshall explains how a region ' s geography and physical characteristics affect the decisions made by its leaders. Innovative, compelling, and delivered with Marshall ' s trademark wit and insight, this is a gripping and enlightening exploration of the power of geography to shape humanity ' s past, present, and—most importantly—our future.

In the autumn of 2014, thousands of people, young and educated in their majority, occupied the chief business district and seat of the government in Hong Kong. The protest, known as the Umbrella Movement, called for ' genuine democracy ' , as well as a fairer social and economic system. The book aims to provide a dynamic framework to explain why socioeconomic forces converged to produce such a situation. Examining increasing inequality, rising prices and stagnating incomes, it stresses the role of economic and social factors, as opposed to the domestic political and constitutional issues often assumed to be the root cause behind the protests. It first argues that globalization and the increasing influence of China ' s economy in Hong Kong has weighted on salaries. Second, it shows that the oligopolistic nature of the local economy has generated rents, which have reinforced inequality. The book demonstrates that the younger generation, which is still finding its place in society, has been particularly affected by these phenomena, especially with social mobility at a low point. Offering a new approach to studying the Umbrella Movement, this book will appeal to students and scholars interested in Hong Kong's political landscape, as well Chinese politics more broadly.

Major revelations about the US government ' s drone program—bestselling author Jeremy Scahill and his colleagues at the investigative website The Intercept expose stunning new details about America ' s secret assassination policy. When the US government discusses drone strikes publicly, it offers assurances that such operations are a more precise alternative to troops on the ground and are authorized only when an " imminent " threat is present and there is " near certainty " that the intended target will be killed. The implicit message on drone strikes from the Obama administration has been trust, but don ' t verify. The online magazine The Intercept exploded this secrecy when it obtained a cache of secret slides that provide a window into the inner workings of the US military ' s kill/capture operations in Afghanistan, Yemen, and Somalia. Whether through the use of drones, night raids, or new platforms yet to be employed, these documents show assassination to be central to US counterterrorism policy. The classified documents reveal that Washington ' s fourteen-year targeted killing campaign suffers from an overreliance on flawed signals intelligence, an apparently incalculable civilian toll, and an inability to extract potentially valuable intelligence from terror suspects. This campaign, carried out by two presidents through four presidential terms, has been deliberately obscured from the public and insulated from democratic debate. The Assassination Complex allows us to understand at last the circumstances under which the US government grants itself the right to sentence individuals to death without the established checks and balances of arrest, trial, and appeal. The book will include original contributions from Glenn Greenwald and Edward Snowden.

The revolutionary wave that swept the Middle East in 2011 was marked by spectacular mobilization, spreading within and between countries with extraordinary speed. Several years on, however, it has caused limited shifts in structures of power, leaving much of the old political and social order intact. In this book, noted author Asef Bayat—whose Life as Politics anticipated the Arab Spring—uncovers why this occurred, and what made these uprisings so distinct from those that came before. Revolution without Revolutionaries is both a history of the Arab Spring and a history of revolution writ broadly. Setting the 2011 uprisings side by side with the revolutions of the 1970s, particularly the Iranian Revolution, Bayat reveals a profound global shift in the nature of protest: as acceptance of neoliberal policy has spread, radical revolutionary impulses have diminished. Protestors call for reform rather than fundamental transformation. By tracing the contours and illuminating the meaning of the 2011 uprisings, Bayat gives us the book needed to explain and understand our post-Arab Spring world.

Migration and the movement of people is one of the critical issues confronting the world ' s nations in the twenty-first-century. This book is about the economic contribution of migration to and from New Zealand, one of the most frequently discussed aspects of the debate. Can immigration, in economic terms, be more than a gap filler for the labour market and help as well with national economic transformation? And what is the evidence on the effect of migration not just on house prices but also on jobs, trade or broader economic performance? Building on Sir Paul Callaghan ' s vision of New Zealand as a place " where talent wants to live " , this book explores how we can attract skilled, creative and entrepreneurial people born in other countries, and whether our " seventeenth region " —the more than 800,000 New Zealanders living abroad —can be a greater national asset.

Informed by world-systems analysis, this book examines the shifting patterns of accommodation and resistance to the offshore world, with a particular focus on Mauritius as a critical but underappreciated offshore node mediating foreign investment into India and Africa. Drawing on a large pool of financial data and elite interviews, the authors present the first detailed comparative study of the Mauritius-India and Mauritius-Africa offshore relationships. These relationships serve as indicative test cases of the contemporary global tax reform agenda and its promise to rein in offshore finance. Whereas India ' s economic power and multilateral track record have enabled it to actively shape this agenda and implement it in a robust manner, most African countries have found themselves either unable to meet its stringent criteria or unwilling to do so out of fear that it might discourage investment. Its impact on offshore financial centers has likewise been limited. A few of the least sophisticated ones appear to have fallen by the wayside, but the rest have either remained largely unaffected, or, like Mauritius, succeeded in consolidating their operations and surviving the current round of regulatory headwinds. The findings suggest that the contemporary global tax reform agenda has thus far not only failed to make good on its promise but also actually reinforced numerous existing power hierarchies. The Uneven Offshore World is written in an accessible style and aimed at readers without specialized knowledge of tax issues.
