In mathematics, a square root of a number x is a number y such that $y^2 = x$; in other words, a number y whose square (the result of multiplying the number by itself, or $y \cdot y$) is x. For example, 4 and -4 are square roots of 16, because $4^2 = (-4)^2 = 16$. Every nonnegative real number x has a unique nonnegative square root, called the ...

The whole class is helped when you ask questions about the math concepts. Don't suppose your question is "too stupid", while they are stupid questions, odds are that your question is not stupid and probably many others in the class are stuck on the same question. For Section 3 (M-W-F schedule) Or, if you are in Section 8 (T-TH schedule):

Calculus 120, section 1.8 The Derivative as a Rate of Change notes by Tim Pilachowski So far, most of our focus has been on derivatives of functions as the slope of the curve at a point. But recall the derivation of slope for a line as a rate of change: $\frac{\Delta y}{\Delta x} = \frac{\text{change in } y}{\text{change in } x} = m$. So it 's no real surprise that we can talk
