All organisations are affected by fraud, but disproportionately so for SMEs given their size and vulnerability. Some small businesses that have failed to manage business fraud effectively have not only suffered financially but also have not survived. This book provides a guide for SMEs to understand the current sources of business fraud risk and the specific risk response actions that can be taken to limit exposure, through the structured discipline of enterprise risk management. The book provides a single-source reference: a description of all of the common fraud types SMEs are facing in one location. An overview of enterprise risk management: a tool to tackle fraud (as recommended by the Metropolitan Police Service and many other government-sponsored organisations). Illustrations of fraud events: diagrams/figures (where appropriate) of how frauds are carried out. Case studies: case studies of the fraud types described (to bring the subject to life and illustrate fraud events and their perpetrators) enabling readers to be more knowledgeable about the threats. Sources of support and information: a description of the relationship between the government agencies and departments. What to do: ' specific actions ' to be implemented as opposed to just recommending the preparation of policies and processes that may just gather dust on a shelf. The book gives SMEs a much better understanding of the risks they face and hence informs any discussion about the services required, what should be addressed first, in what order should remaining requirements be implemented and what will give the best value for money.

Military and political leadership failed Americans. A year went by and the unethical experiments continued. The military denied help and law enforcement was not informed or equipped to investigate. "Providing the Governor and the President with ready forces in support of state and federal authorities at home and abroad" is the public mission statement of the Texas Military Department. Yet, people were worried and Texas was marked as "hostile" territory over a year prior. When local and national news reported on Jade Helm 15, the official narrative explained how Special Operations military exercises were to take place across seven states from July to September 2015. Where were the drills on private property and how was the military "Mastering the Human Domain"? News writers and pundits mocked while others feared tanks and troops with guns. Meanwhile, United States Army Special Operations Command planned unconventional warfare exercises that proved to be an invisible high-tech civil war brought to the minds of the citizenry. This book reveals the letter to the Governor of Texas - a request for help - that uncovered one technology consultant's first-hand nightmarish account of the Jade Helm 15 and UWEX 16 military events that continued long after news reporters in the media (and even the President of the United States) sarcastically declared them over. You will uncover the answers to... What civil rights and liberties of individuals were infringed upon? How can the government use technology to sabotage decision makers? How were trade secrets, intellectual property, and strategies for hedge funds stolen by alleged employees of a major defense contractor for systems they lease to the military and intelligence organizations? What was the daily life of "history's most-targeted individual" - a lone wolf professional tech geek living peacefully in the suburbs of Dallas, Texas - the hapless focal point of what can now be seen as the longest most unethical series of experiments to take place on American soil? What were the discoveries that could impact the field of psychology? How does the military "install" a Manchurian President? ...and how your military and law enforcement will respond if you experience most people's worst nightmare day after day for minutes, hours, days, weeks, and months at a time. Who exposed the military command and defense contractors using satellite-based Remote Neural Monitoring (RNM) and Transcranial Stimulation technologies to carry out criminal acts against the private citizens they are sworn to protect? Foreword address delivered by President Barack Obama, 44th President of the United States of America. Among the most important writings on the topics of next-era unconventional warfare in modern military history. A must-read for every American. It is vital that every practitioner in the fields of law and psychology continue their education by reading this book. First responders everywhere - police officers, emergency medical services, firefighters, rescue, and security personnel - reserve your copy of this very important publication today to be better equipped with questions to patiently assist. Proceeds from book sales help to support legal expenses of the author.
