Quality function deployment is a method developed in Japan beginning in 1966 to help transform the voice of the customer into engineering characteristics for a product. Yoji Akao, the original developer, described QFD as a "method to transform qualitative user demands into quantitative parameters, to deploy the functions forming quality, and to deploy methods for achieving the design quality into subsystems and component parts, and ultimately to specific elements of the manufacturing process." T

Quality function deployment - Wikipedia
Quality function deployment is a LEAN technique that is a little out of scope for Six Sigma Green Belt practitioners and more useful for Black Belt practitioners. Yet, it is a powerful tool to design processes or products according to customer requirements. Quality function deployment is abbreviated as QFD. It fits into the Define phase of the DMAIC structure as briefly stated in the online free Six Sigma training.

What Is Quality Function Deployment (QFD) and Why Do We ...
Quality Function Deployment consists of four main steps: identify the customer's vital requirements for the product or service and translate them into design requirements. develop a service blueprint of an elegant, effective, and efficient delivery process. evaluate alternative designs.
