## Ranking Task Exercises in Physics: Student Edition

The idea of the ranking task is to have a student compare a number of physically similar systems that are allowed to vary in only one or two ways. The student must rank the systems (usually from greatest to least) on the basis of one of the system's physical variables (i.e.-velocity, acceleration, electric field strength, current, etc.).

Activity outline. Each exercise consists of four elements: a place to record the ranking of each variation; a description of the physical situation, including any constraints and the basis for ranking different arrangements; a set of figures showing the different arrangements of the situation to be compared; a place to explain the reason for each ranking choice.

This resource book for physics educators contains approximately 200 Ranking Task Exercises which cover all classical physics topics with the exception of optics. Ranking Tasks are in an innovative type of conceptual exercise that asks students to make comparative judgments about a set of variations on a particular physical situation. These exercises were developed by participants in the Two-Year College (TYC) Physics Workshop Project sponsored by Joliet Junior College, Lee College, and a series of grants from the Division of Undergraduate Education of the National Science Foundation and were edited by Thomas L. O'Kuma (Lee College), David P. Maloney (Indiana University-Purdue University, Fort Wayne), and Curtis J. Hieggelke (Joliet Junior College). Those who have used Ranking Tasks have found that they frequently elicit students' natural ideas, rather than a memorized response, about the behavior of a given physical system. In addition, asking students to consider the same situations in a variety of ways often helps them begin to correct any misconceptions they may have. the same question, they begin to think about why they responded as they did in each case. This, in turn, prompts them to consider which responses they believe in more strongly, and why. The basic atructure of a Ranking Task comprise four elements: \*a description of the physical situation including any constraints and the basis for ranking different arrangements \*a set of figures showing the different arrangements of the situation to be compared \*a place to record the ranking of each variation \*a place to explain the reason for each ranking choice A CD-ROM in the back of the book provides each Ranking Task in a pdf file for ease of use in printing and copying for non-commercial classroom needs.

TIPERs: Sensemaking Tasks for Introductory Physics gives introductory physics students the type of practice they need to promote a conceptual understanding of problem solving. This supplementary text helps students to connect the physical rules of the universe with the mathematical tools used to express them. The exercises in this workbook are intended to promote sensemaking. The various formats of the questions are difficult to solve just by using physics equations as formulas. Students will need to develop a solid qualitative understanding of the concepts, principles, and relationships in physics. In addition, they will have to decide what is relevant and what isn't, which equations apply and which don't, and what the equations tell one about physical situations. The goal is that when students are given a physics problem where they are asked solve for an unknown quantity, they will understand the physics of the problem in addition to finding the answer.

A supplementary workbook containing conceptual exercises in eleven different formats developing students' reasoning about physics and leading them to more effective quantitative problem solving.
