The market-leading European text on management accounting and comprehensive authority on all aspects of the subject has been streamlined and substantially redesigned in its 6th edition to make it even more suitable for the needs of todays student. The aim of the new edition is to explain the principles involved in the design and evaluation of management and cost accounting information systems. The emphasis in the book is on management accounting systems that will be used for internal decision-making purposes within an organisation, however, cost accounting systems for external reporting are also comprehensively covered. It has been brought up to date with the latest developments in the subject. Having been made stronger pedagogically with the addition of the answers to the questions and more real-world mini cases, the text brings home the relevance of the subject matter to the real world of business.

Horngren's "Cost Accounting" defined the cost accounting market and continues to innovate today by consistently integrating the most current practice and theory. This acclaimed, number one market-leading book embraces the basic theme of " different costs for different purposes." It reaches beyond cost accounting procedures to consider concepts, analyses, and management. This latest edition of "Cost Accounting" incorporates the latest research and most up-to-date thinking into all relevant chapters. Professional issues related to Management Accounting and Management Accountants are emphasized. Chapter topics cover the accountant' s role in the organization to performance measurement, compensation, and multinational considerations. For future accountants who want to enhance their understanding of-and ability to-solve cost accounting problems.

For undergraduate and MBA Cost or Management Accounting courses The text that defined the cost accounting market. Horngren's Cost Accounting, defined the cost accounting market and continues to innovate today by consistently integrating the most current practice and theory into the text. This acclaimed, market-leading text emphasizes the basic theme of "different costs for different purposes," and reaches beyond cost accounting procedures to consider concepts, analyses, and management. This edition incorporates the latest research and most up-to-date thinking into all relevant chapters and more MyAccountingLab® coverage! MyAccountingLab is web-based tutorial and assessment software for accounting that not only gives students more "I Get It" moments, but gives instructors the flexibility to make technology an integral part of their course, or a supplementary resource for students. Please note that the product you are purchasing does not include MyAccountingLab. MyAccountingLab Join over 11 million students benefiting from Pearson MyLabs. This title can be supported by MyAccountingLab, an online homework and tutorial system designed to test and build your understanding. Would you like to use the power of MyAccountingLab to accelerate your learning? You need both an access card and a course ID to access MyAccountingLab. These are the steps you need to take: 1. Make sure that your lecturer is already using the system Ask your lecturer before purchasing a MyLab product as you will need a course ID from them before you can gain access to the system. 2. Check whether an access card has been included with the book at a reduced cost If it has, it will be on the inside back cover of the book. 3. If you have a course ID but no access code, you can benefit from MyAccountingLab at a reduced price by purchasing a pack containing a copy of the book and an access code for MyAccountingLab (ISBN : 9781292079080) 4. If your lecturer is using the MyLab and you would like to purchase the product... Go to www.myaccountinglab.com to buy access to this interactive study programme. For educator access, contact your Pearson representative. To find out who your Pearson representative is, visit www.pearsoned.co.uk/replocator

This book covers all aspects of deficiency of essential elements and excess of toxic ones in crop plants. The metal deficiency and toxicity are the two sides of same problem that are threatening to sustainable agricultural growth. The book presents prospective strategies for the management of elemental nutrition of crop plants. Chapters are arranged in a manner so as to develop a lucid picture of the topic beginning from basics to advanced research. The content is supplemented with flow charts and figures to make it convenient for readers to holistically grasp the concepts. It will be a value addition for students, research scholars and professionals in understanding the basics as well latest developments in the area of metal deficiency and excess in crop plants.

With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the Handbook of African Medicinal Plants provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.

The extent of urban air pollution in Pakistan—South Asia's most urbanized country—is among the world's most severe, significantly damaging human health, quality of life, and the economy and environment of Pakistan. The harm from Pakistan's urban air pollution is among the highest in South Asia, exceeding several high-profile causes of mortality and morbidity in Pakistan. Improved air quality management (AQM) in Pakistan can have notable economic and health benefits. For example, the estimated health benefits per dollar spent on cleaner diesel are approximately US \$1–1.5 for light-duty diesel vehicles and US \$1.5–2.4 for large buses and trucks. This report advocates that Pakistan allocate resources to AQM, because its air quality is severely affecting millions of Pakistanis, and because experiences around the world indicate that interventions can significantly improve air quality. This report details a broad spectrum of research on Pakistan's AQM challenges, and identifies a comprehensive set of steps to improve air quality. The research presented here underpins the conclusions that addressing Pakistan's urban air pollution requires coordinated interventions to strengthen AQM, build agencies' institutional capacity, bolster AQM's legal and regulatory framework, implement policy reforms and investments, and fill knowledge gaps. However, Pakistan's policy makers face major obstacles, including limited financial, human, and technical resources, and can pursue only a few AQM interventions at the same time. In the short term, Pakistan's AQM should give highest priority to reducing pollutants linked to high morbidity and mortality: PM2.5 (and precursors like SOx and NOx) from mobile sources. A second-level short-term priority could be PM2.5, SOx, and emissions of toxic metals from stationary sources. An important medium-term priority should be mass transportation in major cities, controlling traffic, and restricting private cars during high-pollution episodes. A long-term priority could be taxing hydrocarbons, based on their contribution to greenhouse gases.
