This does not affect the smaller satellite (moon) maps which fit on a single page. The fantastic hardcover Nasa Atlas of the Solar System (1997) also had this problem but resolved it neatly by having the enormous pages fold open completely flat. Nevertheless, I will keep the Space Atlas and refer to it often.

fascinating imagery from recent space missions partner with clear, authoritative scientific information. Starting with the sun and moving outward into space, acclaimed science writer and physicist James Trefil illuminates each planet, the most important moons, significant asteroids, and other objects in our solar system. Looking beyond, he explains what we know about the Milky Way and other galaxies--and how we know it, with clear explanations of the basics of astrophysics, including dark matter and gravitational waves. For this new edition, and to celebrate the 50th anniversary of his moonwalk, astronaut and American hero Buzz Aldrin offers a new special section on Earth's moon and its essential role in space exploration past and future.

"This ... atlas takes readers through maps of the solar system, the Milky Way, and deep space, giving them a close look at and locations of planets, supernovas, and other universes. Sky maps will help kids spot these objects in the night sky and maps of planets and our solar system give the kind of ... detail that National Geographic is known for"--Amazon.com.

An overview of the planets, moons, and other bodies of the solar system, as well as distant stars, galaxies, and other celestial phenomena.

Provides facts about the solar system, space exploration, and the creation of the universe, and answers such questions as "Are we alone in the universe?"

"Filled with lavish illustrations, this book is a grand tour of the universe. Three ever widening domains are presented--the planets, the stars, and the large scale universe itself--each including the ones before it and extending outward"--

In the history of space exploration, there have been many leaps for humankind. From the foremost experts at the Smithsonian's National Air and Space Museum, here is a complete visual narrative of our journey from Earth to the stars. . . . Although the momentous October 4, 1957, launch of Sputnik 1 was not the beginning of humanity's adventure toward space--our curiosity about the skies has been one of the few constants in history--it was the first true venture into orbit. And when future generations think of the twentieth century, they will undoubtedly judge our movement into space, with both machines and people, as a crowning achievement. As we progress in the new millennium, space exploration is vital to managing our global future, as well as to understanding our past and the creation of Earth. The Atlas of Space Exploration depicts

the ever-fascinating history of the space age and humanity's progress in exploring new frontiers. Incredible images from NASA and other sources, visual conceptions of Moon bases, and newly commissioned maps reveal a visual history spanning the earliest eras of the universe, the dawn of the space age, the launch of Sputnik, missions to the Moon, robot landings on the terrestrial planets, and the exploration of the outer solar system. These developments in technology are illuminated by a rich historical context, highlighting how space exploration has changed and expanded our vision of the universe.

What is life like on the International Space Station? Can we survive on Mars? Why is Pluto no longer a planet? Just how big is the universe anyway? The ultimate guide to our galaxy, Space Atlas answers all these questions and more while exploring the far reaches of space, from our own planet to neutron stars, thousands of light years away. Showcasing significant locations in space which are explored in-depth with stunning illustrations, interesting fact files, diagrams and information on scientific achievements, this unique atlas tells you everything you could ever want to know about the universe, while taking you on a stunning visual journey through the stars. Featuring in-depth explorations of the Sun, the Earth, the solar system, black holes, quasars and
