The self learning exercises help you learn and practice basic concepts of Tekla Open API. The exercises work through some typical issues developers might face. Once you become familiar with the API you can develop your own applications for other cases. The exercises are divided into several smaller exercises, which build up into an application that creates a building frame and later produces drawings from that.

Tekla Structures opens a command prompt when you add a component. Do not close the prompt window, because it displays information on adding the component. This information can be useful in problem situations. 1. Click the Applications & components button in the side pane to open the Applications & components catalog. You can also press Ctrl + F. 2.

Tekla Structures 2017
Students will be taught how Tekla Structures uses automated routines to number all the parts in the model and lastly, will be guided through the process and tools used to generate erection drawings and shop tickets. Attendees will be sent a short exercise prior to class which will show them how to build a basic precast structure.

Precast Basic Training | Tekla
Tekla Structures includes the following load types: Load type Description Point load A concentrated force or bending moment that can be attached to a part. Line load A linearly-distributed force or torsion. By default it runs from a point to another point. You can also create a line load with offsets from the points.
