1900s, is used throughout North America and across the globe.

Building with Tilt-Up | Tilt-up Concrete Association

Tilt-up, tilt-slab or tilt-wall is a type of building and a construction technique using concrete. Though it is a cost-effective technique with a shorter completion time, poor performance in earthquakes has mandated significant seismic retrofit requirements in older buildings.

Tilt up - Wikipedia

The main aspect of tilt-up construction that makes it unique is the way that the concrete structural supports, columns, and walls are created. These elements are all formed on the ground and then tilted into a vertical position with the assistance of a crane. The tilt-up construction process

Tilt up construction - Designing Buildings Wiki

Tilt-up construction involves site-casting the concrete walls of a building on its floor slab or on a separate casting bed and then tilting and lifting them into position by crane. The result is rapid construction arising from a well-planned process more akin to a factory production line, but retaining the flexibility of in-situ concrete work.
